

INTERNATIONALIZATION · INNOVATION · EXCLUSIVITY
SUSTAINABILITY · CUSTOMER SERVICE

Special Chemicals is a family business created in 1994 in Barcelona specializing in the production and distribution of raw materials for the cosmetic and perfumery sector.

The company was founded by Salvador Aymí, the result of his long experience of more than 20 years as a sales technician in the chemical sector. The company is currently run by his children Gerard and Marta Aymí.

Unlike large wholesalers who are active in all sectors of the chemical industry, Special Chemicals is exclusively active in the cosmetics and perfumery sectors, meeting national and international quality and environmental standards.

With offices located in the centre of Barcelona and several external warehouses, Special Chemicals manages the growing demand on all continents of the world, exporting since 2011 under the strategic engine of I+I (innovation and internationalization).

As the end consumer demands more natural and sustainable product, the company expands its catalogue with a clear commitment to natural and ecological raw materials.

The company became part of the Beauty Cluster group in Barcelona since the year of its foundation in 2014, this association works to improve sustainable development and competitiveness of the cosmetics, perfumery, and personal care sector value chain.
